

短链管理

基础包提供短链管理功能，可生成分享链接的短链，包括web分享短链，小程序分享短链，APP分享短链

使用代码示例：

```
AppRouter router = IApplicationService.get().buildAppRouter(title, viewModel,
viewCode, modelId, uuid);
String routersShortLink = AppCacheUtil.buildRoutersShortLink(router);
ShareLinkType shareLinkType = input.getShareLinkTypeEnum();
if(shareLinkType == ShareLinkType.Miniprogram) {
    Map<String,Object> projectConfig = new LinkedHashMap<>();
    //ws请求链接
    String wsUrl = QueryWebSocketConnectUrl.query(panelContext);
    projectConfig.put("url", wsUrl);
    projectConfig.put("cell", IAppFeLoginPage.class.getName());
    Map<String,Object> initParam = new LinkedHashMap<>();
    initParam.put(AppCacheUtil.InitParam_SystemUuid,
shareAppSetting.getUuid());
    initParam.put(AppCacheUtil.InitParam_AppCode,
shareAppSetting.getName());
    initParam.put(AppCacheUtil.InitParam_AppSessionKey,
shareAppSetting.getSessionKey());
    try(IJson json = IJsonService.get().getJson()){
        initParam.put(AppCacheUtil.InitParam_RoutersShortLink,
routersShortLink);
        projectConfig.put("initParam", initParam);
    }
    String appId = input.getAppIdVarValue();//
    if(CmnUtil.isEmpty(appId))
        throw new VerifyException("小程序appId未配置，请先配置！");
    String envVersion = input.getEnvVersionVarValue();
    String weAppLink =
IShortLinkService.get().buildMiniProgramLink(appId, projectConfig,envVersion);
    shareLink =
IShortLinkService.get().buildMiniProgramShortLink(shortLinkServerUrl,weAppLink);
}else if(shareLinkType == ShareLinkType.APP) {
    if(CmnUtil.isEmpty(appShortLink)) {
        throw new VerifyException("APP短链未配置！");
    }
    String appLink = appShortLink + "/detail?query=#query#";
    Map<String,String> regexMap = new LinkedHashMap<>();
    regexMap.put("#query#", routersShortLink);
    String weAppLink = ToolUtilities.replaceAll(appLink, regexMap);
    shareLink =
IShortLinkService.get().buildMiniProgramShortLink(shortLinkServerUrl,weAppLink);
    shareLink = shortLinkServerUrl + "/jumpApp.html?
appCode="+shareAppCode+"&appLink="+weAppLink;

}else if(shareLinkType == ShareLinkType.Url) {
    shareLink = shortLinkServerUrl+"/"+ shareAppCode + "/detail?
query=#query#";
    Map<String,String> regexMap = new LinkedHashMap<>();
```

```
    regexMap.put("#query#", routerShortLink);  
    shareLink = ToolUtilities.replaceAll(shareLink, regexMap);  
}
```
