# 表单提交按钮进度干预

表单提交按钮进度干预,可使用平台带的通知对象,或自定义构建进度通知对象实现表单提交过程中的交互信息。

## 使用说明

确定

#### 动作使用实例:

```
package cell.study.progress;
import java.util.LinkedHashMap;
import java.util.Map;
import bap.cells.Cells;
import cell.CellIntf;
import cmn.anotation.ClassDeclare;
import cmn.dto.Progress;
import cmn.enums.ProgressConfirmOperation;
import cmn.enums.ProgressMessageType;
import cmn.util.ProgressUtil;
import gpf.dc.action.intf.BaseActionIntf;
import gpf.dc.action.param.BaseActionParameter;
@ClassDeclare(label = "进度通知代码样例"
,what="进度通知代码样例"
, why = ""
, how = ""
,developer="陈晓斌"
,version = "1.0"
,createTime = "205-01-17"
```

```
,updateTime = "205-01-17")
public interface IActionStudyProgress<T extends BaseActionParameter> extends
CellIntf, BaseActionIntf<T>
{
   public static IActionStudyProgress get(){ return
Cells.get(IActionStudyProgress.class);}
   @override
   default Object execute(T input) throws Exception {
       Progress prog = input.getRtx().getProgress();
       //发送消息
       ProgressUtil.setMessage(prog, "发送一条进度消息", true);
       ProgressUtil.sendProcess(prog, 10, "发送一条带进度的消息", true);
       //弹出确认框,注意要考虑流程纯后台提交,上下文没有携带进度通知对象的处理场景,默认null是
返回ProgressConfirmOperation.YES的处理结果
       int option = ProgressUtil.showConfirmDialog(prog,"请确认是否继续进行?", "请
选择", ProgressConfirmOperation.YES);
       if(option == ProgressConfirmOperation.YES.getValue()) {
           //弹出消息框
           ProgressUtil.showMessageDialog(prog,"你选择了是!\n你选择了是!\n你选择了
是!\n你选择了是!\n你选择了是!\n你选择了是!\n你选择了是!\n你选择了是!\n","",
ProgressMessageType.success);
       }else {
           ProgressUtil.showMessageDialog(prog,"你选择了否!", "",
ProgressMessageType.info);
       //弹出确认框
       option = ProgressUtil.showConfirmDialog(prog,"请确认是否继续进行?","请选择
1", ProgressConfirmOperation.YES, ProgressMessageType.info);
       if(option == ProgressConfirmOperation.YES.getValue()) {
           ProgressUtil.showMessageDialog(prog,"你选择了是!", "",
ProgressMessageType.warning);
       }else {
           //弹出消息框
           ProgressUtil.showMessageDialog(prog,"你选择了否!","",
ProgressMessageType.error);
       }
       //构建自定义
       Map<String,Object> userObject = new LinkedHashMap<>();
       userObject.put("选项", option);
       //发送自定义对象到进度通知
       ProgressUtil.sendDataFrame(prog,userObject);
       //断言用户是否执行取消操作,确认取消将抛出UserCancelException
       ProgressUtil.assertCancel(prog);
       return null;
   }
}
```

### 自定义进度通知实现

buildProgress为进度通知对象的构建接口

buildEditPanel为进度通知参数的面板配置接口

具体示例可见: TextAreaProgressBuilder、LoadingProgressBuilder

## 效果实例图
